Student number: HA24010012783

### Scores

Completeness: 2/4

Efficiency: 4/4

Style: 4/4

Documentation: 1/4

### Positive aspects of the submission

Hey Hashim, I hope you are doing well. Great work on completing your task! Here's what I liked about your submission:

You've successfully set up a Node.js module named "my\_first\_task" and initialised it with npm. Installing lodash to your module and utilizing it to remove duplicates from the given array demonstrates a good understanding of npm dependency management and lodash usage. Your script "remove\_duplicates.js" effectively imports lodash and applies the uniq function to produce the desired output.

### Aspects of the submission that could be improved

However, there's a small improvement that could be made:

Consider declaring the variable myArray using the const keyword to indicate that its value should not be reassigned. This enhances code clarity and prevents accidental reassignment.

Secodnly, you should comment your code. This is for your own understanding and to help your team when you code in team settings.

### Overall feedback

Overall, you've done a solid job meeting the requirements of the task. Keep up the good work.
