Positive aspects of the submission

Hashim,

Thank you so much for the PDF document, you did well in terms of your responses.

Working on the optional challenge is something to be commended for, I was able to see that bonus answer, please continue exhibiting that trait.

You accurately explained the concepts of GET and POST requests, response codes, headers, and body. You also clearly described the functionality of the `/pet/{petId}` and `/pet` endpoints in the Petstore API.

Aspects of the submission that could be improved

Some responses were also short compared to others, the fourth one for instance.

HTTP is the foundation of communication between web browsers and servers. Understanding how requests are made, how responses are structured, and what the different status codes mean empowers you to build applications that interact effectively with the web.

Overall feedback

I am looking forward to the next submission, keep it up!
